

Science can be fun

High Touch-High Tech came to Holy Trinity School ready to engage students in experiments with The Power of Light. Third graders in Mrs. Cifarelli's class learned that light can travel from Connecticut to California in two seconds. They even blew bubbles to prove that light can travel through different substances, such as air and water. Aidan, Zachary, and Bridget are all smiles as they try to see how light is refracted into the colors of the spectrum.
